

KAPIL BADOKAR

Full-Stack Software Engineer

+917756062382 kapilbadokar321@gmail.com [Portfolio](#) [Linkedin/kapilbadokar](#) [Github/Kapil619](#)

Summary

Full-Stack Software Engineer specializing in building production-ready web and mobile products from concept to deployment. Experienced in React.js, React Native, AWS, Supabase, and AI-powered applications, with end-to-end ownership across architecture, cloud infrastructure, and scalable systems. Passionate about solving complex engineering problems in fast-moving startup environments.

Experience

Hipster Inc

Jul 2025 – Present

Software Engineer

Remote

- Built a React-based reading platform for PDF and EPUB content with document rendering, search, annotations.
- Optimized rendering performance by engineering viewport-scoped DOM algorithms and scaling for 3,000+ pages.
- Developed a synthetic pagination and text-annotation engine, mapping unstructured data to document coordinates.
- Designed the product architecture to support multilingual UI, AI Summary, translation, and AI citation generation.
- Developed desktop applications using Electron.js and extended the platform to React Native mobile application.

Scheduled Inc

Nov 2025 – Present

Founding Engineer

Remote

- Developed an AI-powered productivity platform, collaborating directly with the founder on product development.
- Designed backend workflows using Supabase, implementing authentication, feature flag rollouts, and image parsing.
- Integrated OpenAI APIs and Google Calendar (read/write) to build AI-driven workflows and productivity features.
- Built real-time collaboration, notifications, and offline synchronization to support multi-user productivity experiences.

Saffron AI

Aug 2024 – April 2025

Software Development Engineer Intern

Bangalore, Karnataka

- Led development of a production cross-platform React Native mobile application serving 500+ concurrent users.
- Built cloud infrastructure using AWS Lambda, API Gateway, DynamoDB, SNS, SQS and EC2 for backend services.
- Integrated Firebase Authentication, Firestore, and Realtime Database to build an event-driven application workflow.

Projects

AI-Powered Pest Detection Robot | Python, YOLOv8, Flask, React Native, OpenCV

[Project Link](#)

- Built an end-to-end AI-powered pest detection system using YOLOv8, React Native, Python, and Flask APIs.
- Integrated a Raspberry Pi-powered RC robot with USB webcam to stream pest images for remote identification.
- Developed a cross-platform React Native app to upload images, view live robot feed, and control image capture.
- Enabled real-time image classification and bounding box annotation using OpenCV and asynchronous Flask APIs.

PaperAsh – AI Journal & Diary | React Native (Expo), iOS, Android

[App Store](#)

- Built a journaling app with an offline-first architecture using SQLite and background sync with Supabase.
- Implemented secure authentication with Apple Sign-In and Google Sign-In, including token storage.
- Created subscription flows using RevenueCat with entitlement gating, purchase restoration, and cross-device sync.
- Integrated AI-powered journal reflection and chat features with multi-turn context and per-journal configuration.

Education

Savitribai Phule Pune University

Nov 2021 – Jun 2025

Bachelors in Electronics And Computer Engineering

CGPA : 8.7/10

Technical Skills

Languages : TypeScript, JavaScript, Python, Java, C++
Frameworks & Libraries : React.js, Next.js, React Native (Expo), Redux
Databases : SQL, Firebase, Supabase, DynamoDB, MongoDB
Cloud & DevOps : AWS (Lambda, EC2, S3, SNS), Docker, EAS.
Tools & Platforms : Git, GitHub, Postman, Jira, VS Code, Android Studio

Achievements & Certifications

- **LinkedIn Recommendation:** Received a public recommendation from an Amazon engineer. [Profile](#)
- **Agile Project Management Professional Certificate (Atlassian):** [Credential](#)
